

Building and maintaining LOANIQ platform for a leading investment bank

BUSINESS NEED

- The bank needed to manage existing software systems already developed in a way that the systems can be modified to cater the dynamic requirements of the business.
- An interface was needed to build which would allow heterogeneous systems to communicate with each other.
- Needed to build reports for helping to make business decision based on the data available.

OPPORTUNITIES/CHALLENGES

Involvement of multiple systems required to study each of them individually for designing interfaces for their integration.

enableIT SOLUTION

enableIT built solution that helped link the workflows and data between various systems. The reports based on user's requirements were developed to assist in making business decisions.

VALUE OF INVESTMENT

The implemented solution helped client to organize data flow between various software systems removing manual intervention and minimizing the errors.
