

## **Impact Advantage**

### **BUSINESS NEED**

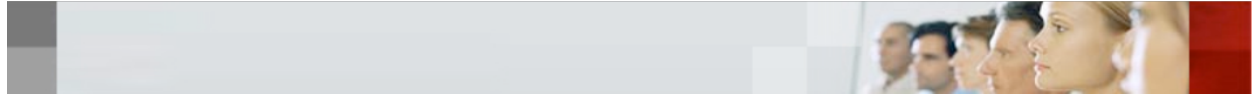

This client is using a separate application called “Impact Advantage” which is used for Auditing purpose. There are some Infrastructure programs runs in Volante (which is written in JAVA) to do the setup. The main focus is on to make Impact Advantage independent of a release.

### **OPPORTUNITIES/CHALLENGES**

The major challenge is that the current technology environment as reflected in Impact did not have the interdependency of release to support the impact deployments and upgrades.

### **enableIT SOLUTION**

The solution implemented by enableIT allowed this financial solutions client. The solution required the Enableit resources to write the new programs to perform the Infrastructure setup in AS400 (Impact Advantage is also written in AS400). Other tasks included gather requirement and documenting the detail Technical design, coding, unit testing, integration testing and documentation.

## **VALUE OF INVESTMENT**

This initiative will provide this particular client with the following benefits for the impact application.

- Support will be easier.
- Processing time will be less.
- It will reduce the development work as they don't need to design the Volante.

## **DOMAIN**

Accounting, Auditing.

## **TECHNOLOGY**

AS 400
